The incredible Tino Sana's

Art Wood Bikes

Bergamo: Old Square

It's a mobile art work ...

you can ride it,

but the pleasure of owning it is enough !

The bicycle, being the first bicycle fully constructed in wood (aside from the movement mechanism and joints), never fails to attract attention.

It is the result of careful research, making use of high frequency pressed layers of beech and ash wood together with hard wood inlays, thus guaranteeing strength and durability.

The mechanical parts are all Made in Italy, a country known worldwide, among other things, for its bicycles.

Both the design of this unique bicycle and components specifically built for it, such as wheel hubs, rear forks and other details built into the frame, are patented.
